

At ICW, our focus is building a national multi-location team to support ICF manufacturers, dealers, distributors and contractors by delivering installed services for residential and commercial projects. ICF construction is now one of the fastest growing building processes in North America. In fact, it's projected that ICF technology will account for more than 15% of all residential homes built by the year 2008.

Our Mission

ICW is dedicated to becoming the market leader of installed Insulated Concrete Form (ICF) systems across the residential and light commercial construction industries. ICW will maintain the highest standards to ensure complete customer satisfaction along with creating a friendly, fair, and creative work environment.
